Análisis de la eficiencia de algoritmos

Yábir G. Benchakhtir

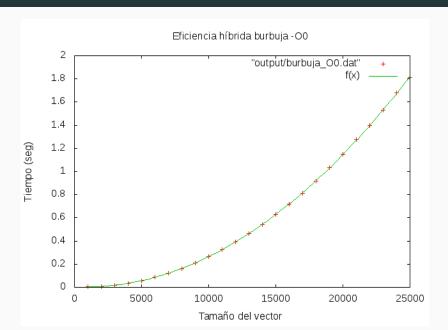

14 de marzo de 2018

Doble Grado en Ingeniería Informática y Matemáticas

Algoritmos a analizar

- Burbuja
- Insercción
- Selección
- Mergesort
- Quicksort
- Heapsort
- Floyd
- Hanoi

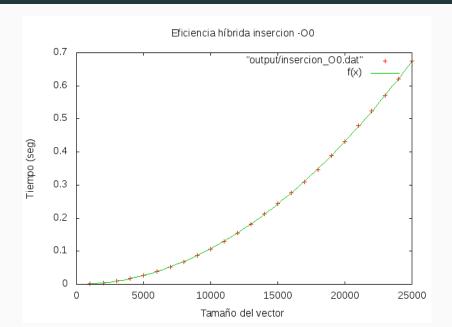

Algoritmo burbuja

$$ax^2 + bx + c$$

final	$\operatorname{\mathtt{sum}}$	of	squares	of	residuals	: 9.8	34713e-0)5	
Final	set	of	paramete	ers		Asyr	nptotic	Standa	rd Error
a			= 3.1	111!	54e-09	+/-	1.128e-	-11	(0.3624%)
b			= -5	. 174	483e-06	+/-	3.02e-0	7	(5.837%)
С			= 0.0	0056	63209	+/-	0.00170)4	(30.26%)

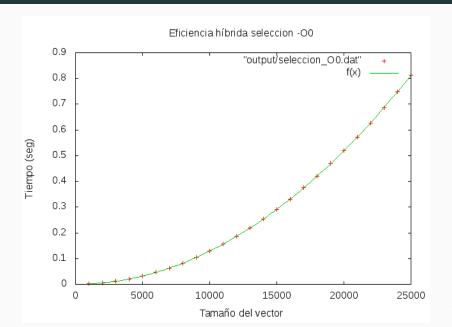

Algoritmo de inserción

$$ax^2 + bx + c$$

final sum o	of squares of residuals	: 7.19712e-05			
Final set	of parameters	Asymptotic Standard Erro	r		
=======	========				
a	= 1.08271e-09	+/- 6.279e-12 (0.5799)	%)		
b	= -7.7687e - 08	+/- 1.682e-07 (216.5%)		
С	= 0.000123925	+/- 0.0009489 (765.7%)		

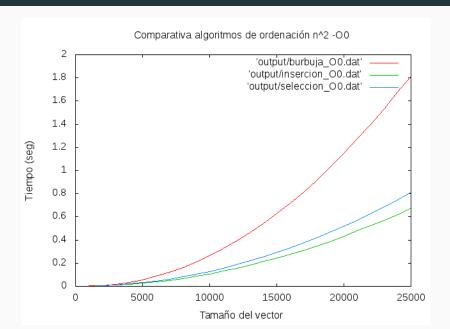

Algoritmo de selección

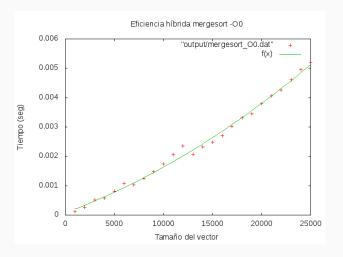

$$ax^2 + bx + c$$

final	sum	of	squares of	residuals	: 8.	779e-06		
Final	set	of	parameters	3	Asyı	nptotic	Standa	rd Error
a			= 1.307	′61e-09	+/-	1.868e-	-12	(0.1429%)
b			= -2.41	748e-07	+/-	5.005e-	-08	(20.7%)
С			= 0.000	572432	+/-	0.00028	324	(49.33%)

Comparación de los algoritmos

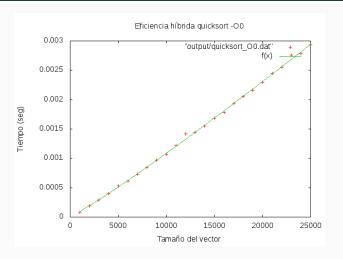

Mergesort

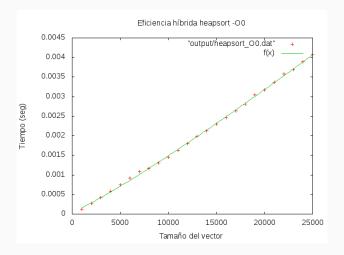

$$ax \cdot log(bx + c) + d$$

Quicksort

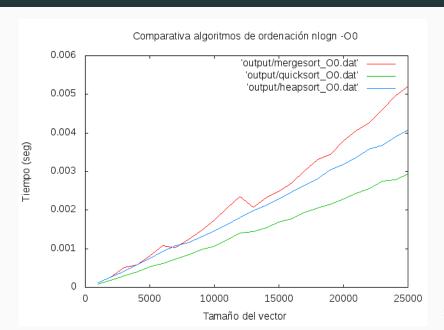

$$ax \cdot log(bx + c) + d$$

Heapsort

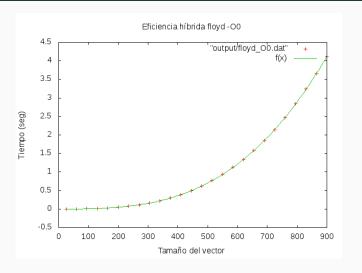

$$ax \cdot log(bx + c) + d$$

Comparación de los algoritmos nlog(n)

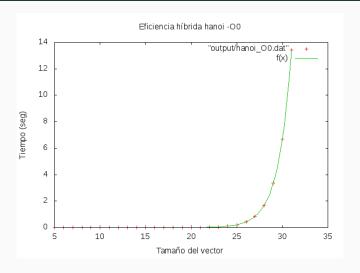

Floyd

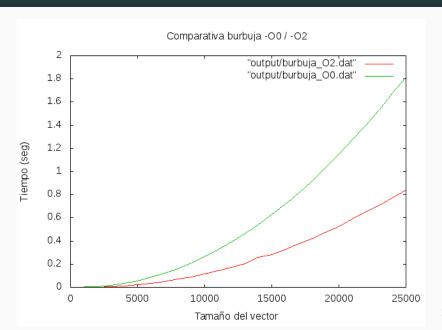

Ajuste realizado con la función $f(x) = ax^3 + bx^2 + cx + d$

Hanoi

Ajuste realizado con la función $a2^x$

Comparaciones usando otras eficiencias (burbuja)

Comparaciones usando otras eficiencias (hanoi)
